BKA Business Process Partners

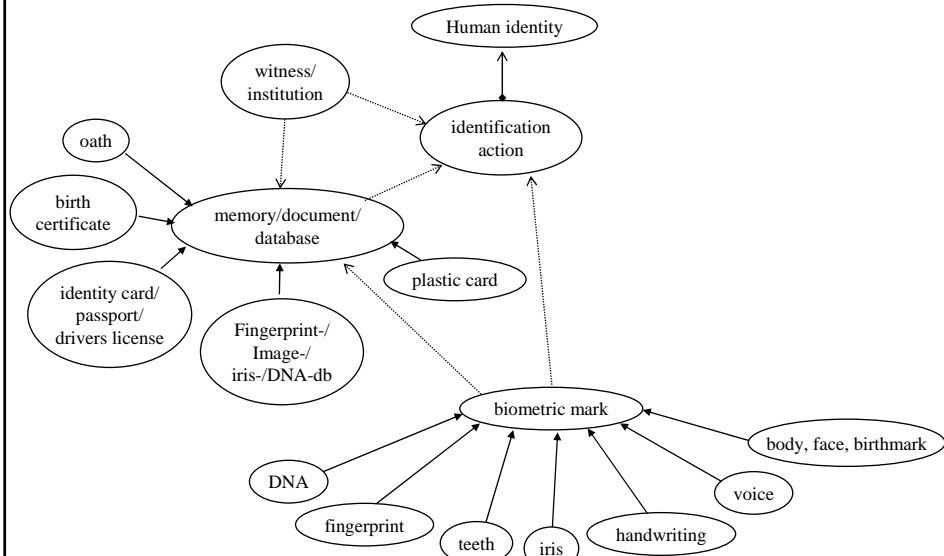

Ontology for Human Identification

Ontology for Human Identification

A Reference Model based on UN/CEFACT Methodology

- Includes class/object models and data domains
- referencing is main purpose
- no physical implementation in a 1st shot
- central repository for core processes
- business-process specific enhancements
- basis for information exchange standard in a 2nd shot

What is to be invested and gained?

- Negotiation and acceptance of common standards
 - Standards have to be developed
 - Some „particularities“ may not be in the core standard
- Improved data quality
 - unified data standard
 - no loss of „particular“ information when transferring data
- Speeding up implementation of new systems
 - no loss of time due to lengthy negotiations
 - less sources for errors due to simplified data transfer

Let's go for XPolice
